

General

Powder-coated aluminium surfaces offer distinct advantages over wood, as they do not warp or rot, ensuring long-lasting durability. Additionally, they are moisture-resistant, mold-resistant, crack-resistant, rust-resistant, and can be effortlessly and swiftly cleaned, providing a hassle-free maintenance experience. This resilient material maintains its integrity even under challenging conditions.

Maintenance of Powder-coated Aluminium.

If a chip occurs on the surface as a result of a heavy sharp weight being dropped from a height, we recommend acquiring small pots of touch-up paint from shop.martinbrownpaints.com/ralcolours/ral-touch-up-paint to effectively address the damage.

Castors

Castors on planters need the braking and swivelling mechanism lubricated with oil on a regular basis depending on exposure and how often they are moved around. If they become stuck they can be released with WD40.

Routine Cleaning

Use a non-abrasive damp cloth and mild detergent. Do not use granular material, bleach or acids. Weekly cleaning is recommended.
