

Accreditation:

We are accredited by the Furniture Industry Sustainability Program (FISP) with an annual audit of our progress.

Component Re-use and Circular Design:

A feature of many of our designs is that components can often be re-used e.g. Trestle legs can be re-used with different or new tops. The FISP auditor commented that our product range was one of the best in the industry for re-use and recycling, and we are investigating to what extent we can update our processes into a fully-fledged Circular Design way.

Waste Minimisation:

We ensure wherever possible that the sizes we choose for our products create minimal waste of materials such as sheet materials and aluminium extrusions.

Local Manufacture and USA Licence:

We manufacture our products for UK and Europe in the South of England, and have stopped exporting products to the USA in favour of licensing our designs to be made there by a partner company.
