

### **Component Re-use and Circular Design**

We are dedicated to upholding the principles of Circular Design as a cornerstone of our environmental initiatives. Our products embody sustainability and maximize resource efficiency from their inception to their end-of-life stage.

A feature of many of our designs is that components are able to be re-used e.g. Trestle legs can be switched between alternative table tops. Our products are also 100% recyclable.

### **Waste Minimisation**

We ensure wherever possible that the sizes we choose for our products create minimal waste of materials such as sheet materials and aluminium extrusions.

### **Environmentally Friendly**

Products are Volatile-Organic-Compound free and delivered to customers in FSC certified cardboard.

### **Longevity of Products**

Our products are designed to last indefinitely in challenging environmental conditions.

### **Local Manufacture and USA Licence**

We manufacture our products for UK and Europe in the South of England. We have stopped exporting products to the USA in favour of licensing our designs to be made there by a partner company.
